

# Door and Drawer Bumper - Package import

## 1. Before You Get Started

**! Before you get started is a great time to back up your Cabinet Vision files...**

- If something doesn't go exactly to plan you'll be able to start over
- Take a look at the section on the Backup Utility in Cabinet Vision's help file

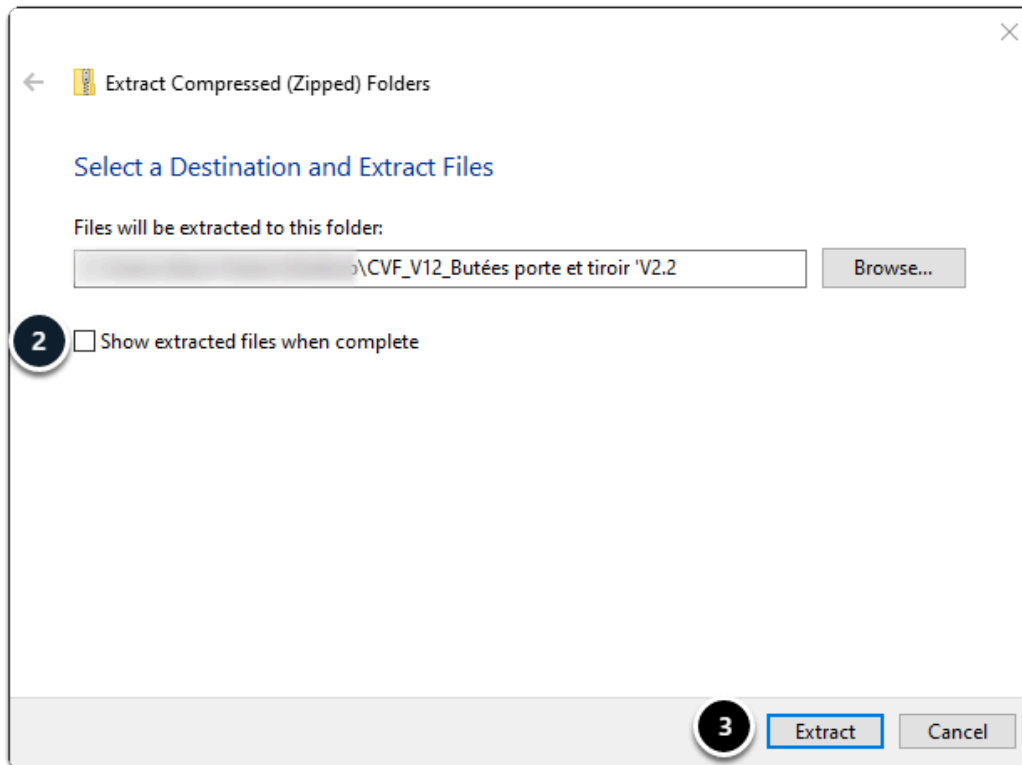

## 2. Installing The Package

### 2.1. Extract The Package

**Our next step is to Unzip the download**

1. Right click > Extract All
2. Un-check "Show extracted files when complete"
3. Extract

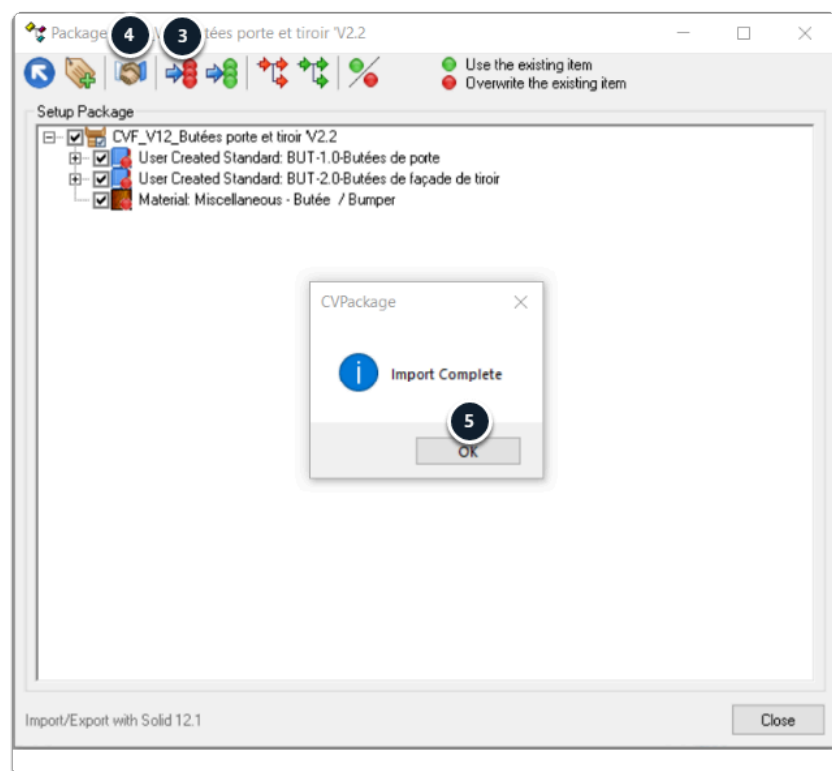

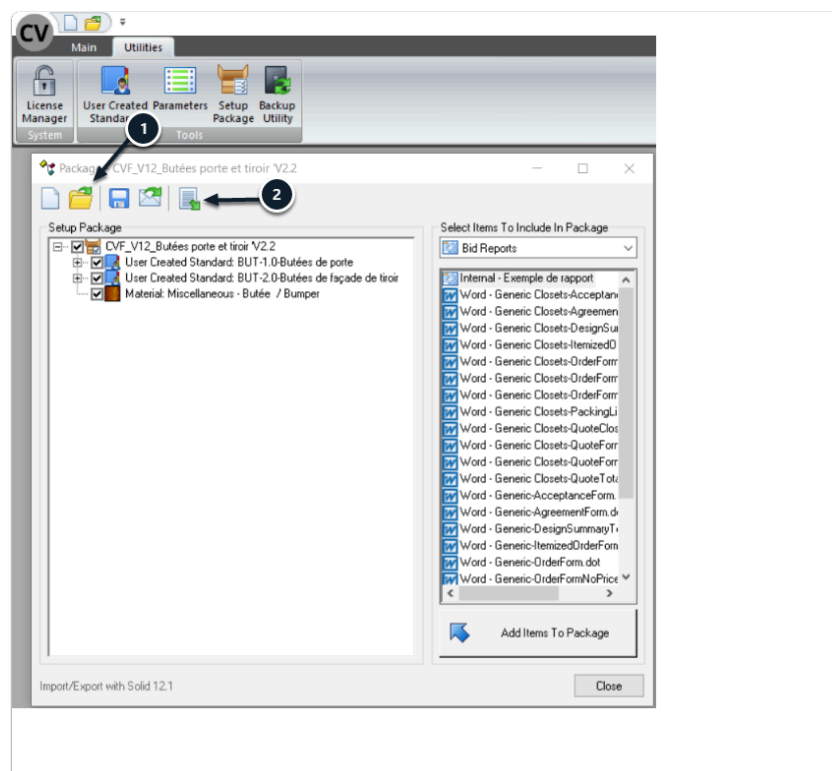

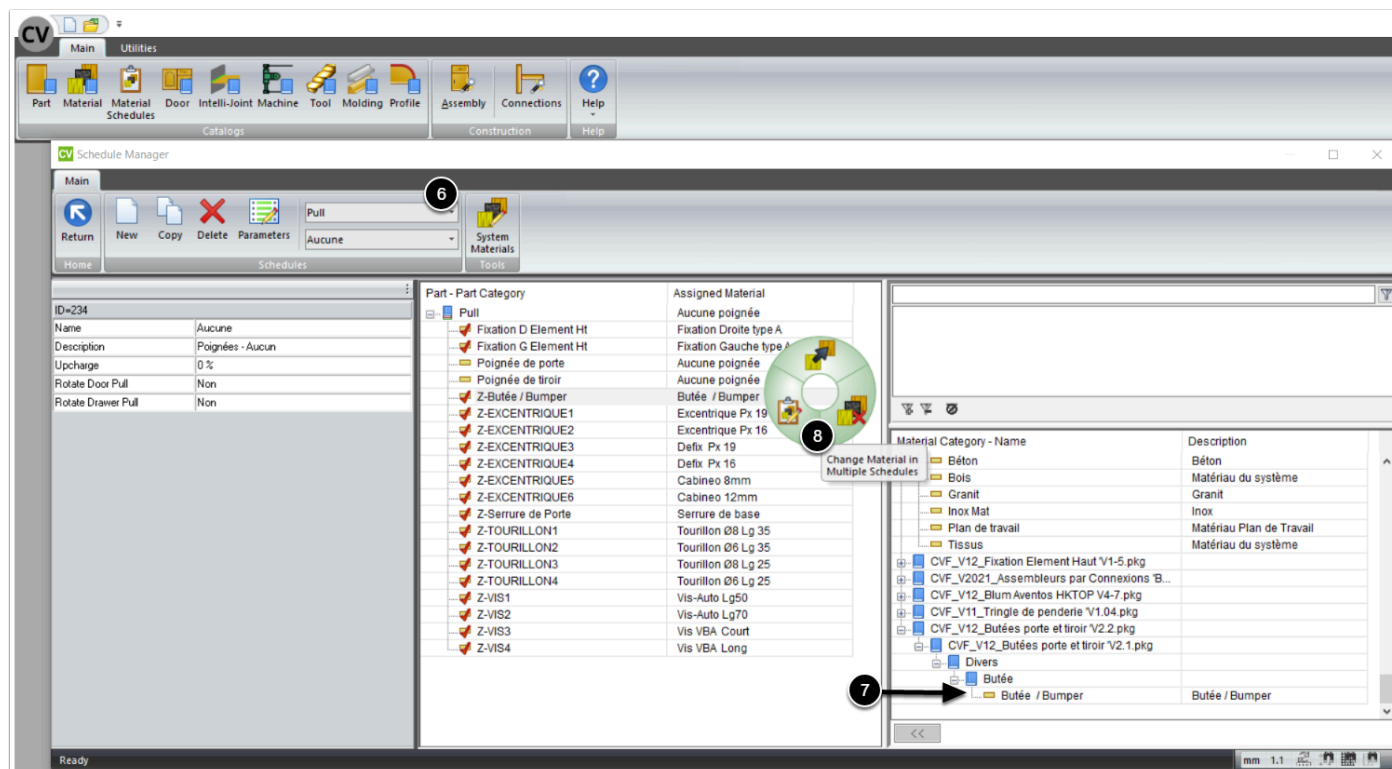

## 2.2. Import The Package

We're ready to import the package into Cabinet Vision > Splash Screen > Utilities > Setup Package tool

1. Open the package
2. Switch to import mode - Swap between Creation and Import Modes
3. Overwrite all Matches
4. Import Package Contents
5. Click OK
6. Go in the Pull Material Schedules
7. Assign the **Bumper** Material to the **Z-Bumper** Part (You can delete the french traduction of the Part and of the Material in their respective catalogues)
8. Right-click on the Part to change the Material on all the Pull Schedules

### 3. What's The Next Step?

Package imported - What is the next step ?
