

EN-Batch Material Creator - How to use the app

1. What is it

This module developed by CVF-Cabinet Vision France aims to improve the speed of creation of materials such as melamine panels. We recommend using materials with supplier names, texture and finish equivalent. We also recommend that you create all the materials you use. You will also need to create the door assignment and distribute it on your construction methods. It is also recommended defining the structure of the names of materials in order to find them easily.

The improvement of the speed of creation passes by the fact of entering only once each information. Settings help you structure your material names in the same way. Your series of materials arrives directly in the list, you only have to change the different values.

2. Fields to fill

Type	Name	Description	Length	Width	Thickness	Default cost	XMATERI/
Panel St...	A{EP}_{REF}	Agglo mélaminé {EP}mm {REF} {DESC} {FOURN}	2800	2070	19	0	141;85;3...
Laminate	S{EP}_{REF}	Stratifié {EP}mm {REF} {DESC} {FOURN}	2800	1350	0.8	0	
Banding	C{LA}A{EP}_{REF}	Chant {LA} ABS {EP}mm {REF} {DESC} {FOURN}	10000	23	2	0	183;100

1. Material Reference : Decor code use by the Manufacturer (H1234)
